

You'll Flip

Over how easy and cost-effective it is using ALPHAGAZ™ pures featuring our exclusive SMARTOP™

Gas on, gas off—with a flip of a lever. Positive action shows valve status and prevents leaks common to rotary valves. Cylinder pressure displays without use of a regulator, so no more accidental returns of half-full cylinders. And an integral residual pressure valve prevents back flow contamination while automatic flow restriction helps protect you in the event of an accidental pressure breach.

Most ALPHAGAZ products feature SMARTOP and our exclusive SCANDINA™ cylinder cap. SCANDINA is non-removable, eliminating the need to hunt down misplaced screw-on valve caps.

Besides providing an extra margin of safety during transport, ergonomic design makes cylinders easier to maneuver. SCANDINA's open form also minimizes insect nesting when cylinders are stored outside.

This is innovation you'd expect from the world's largest supplier of specialty gases, but it's only half the story. Click or call toll-free today for information about ALPHAGAZ pure gases—featuring low impurity levels that ensure peak instrument performance. Guaranteed.
